

Find Your **Weak Spots** Before Somebody Else Does

The reports **CloudWay** experts focus on,
built for you, hosted by **CloudWay Services**

Working with companies all over the world, CloudWay experts have developed the reports they need and use every day on customer assignments. Surfacing information that is hard to combine, in one single report, saves time and increases quality when helping customers to stay secure. They already share their knowledge with the community, and now you can get the reports, hosted and maintained by CloudWay Services, combined with expert recommendations. We call it: **Proactive Security Monitoring**.

Jan Ketil Skanke, Partner, COO,
Principal Cloud Architect and MVP.

Sandy Zeng, Senior Cloud
Architect and MVP.

Features

Entra ID Tenant settings

What are my tenant settings? When did that setting change? See all tenant settings in one place, with full version history. Compare settings at different dates and see your tenant setting versus CloudWay Services recommended settings.

Intune Enhanced Device Insights

Are you running outdated versions of windows in your environment? Is there enough performance for that upcoming rollout of new software? Stop wondering and simply check using the PSM device inventory, seeing information like name, model, OS version and BIOS version in the same place.

Intune Enhanced App Insights

Exploits in applications is a very common way for intruders to get access or infect your clients. Seeing how many versions of the same app exist in your environment is the first step to making sure you are not running applications with known security issues. Using this report, you can go high and low on clients that need your attention as they're running potentially outdated software.

Entra Conditional Access

Complex and often misunderstood, Conditional Access is vital to strengthen security. Our recommendations tell you which settings are recommended and which are not. See details on all policies, enabled, disabled and report-only. Perhaps best of all; full change history on every attribute of each policy!

Privileged Identity Management (PIM)

See all assigned PIM roles and who is using PIM for what role - and who is not using PIM. Sort out those bad PIM justifications and enforce accountability for privileged users.

Licenses

Users not using their assigned licenses or licenses not assigned? Don't waste money on licenses not needed.

Users without security licenses? Could be a potential security gap that needs action!

Secure Score

Show secure score without having to give users or management any administrative permission makes the PSM report the one stop shop for all your security insights.

Custom reports

Our service gathers all the data from many different places, especially Microsoft Entra and Intune. The data stays secure because it stays in your environment. All the information is easily available for you to make custom reports.
